

INTERNAL REFERENCE · NOT FOR CLIENT DISTRIBUTION

Operations Manual.

The complete client lifecycle, first contact to closed file. Eleven stages, each with a trigger, an owner, a stop rule, and a Done When checklist. If you cannot tick every box, the stage is not finished — regardless of what happens next.

Version v9 · 22 September 2026

Owner Carl Christie, SHSS, RHFAC Professional

Service Senior Home Safety, a Novo Industries Inc. service

Supersedes v8, 11 September 2026

*Items changed in this version are marked **v9***

At a Glance

Operator summary. One page to check before any call or visit. Full detail lives in each stage.

Callback promise	Within 1 business day of first contact (Stage 1). Stated on the website, so treat it as a hard deadline.
Visit length	About 1.5 hours for a condo or apartment, up to 3 hours for a large home. Provisional until the test visit produces real numbers (Open Items, item 5).
Report delivery	Within 3 business days of the visit (Stage 7).
Payment v9	In full before the visit, by Interac e-transfer to payment@novoseniorsafety.com or by a Stripe invoice for card payment — client's choice. Nothing is ever billed after the work. Signed agreement and cleared payment must both be in hand before the date and time are confirmed.
Signing	SignWell only, sent and signed remotely before the visit. Contracts are never signed at the property. See Client Agreement and Signing.
Cancellation	Full refund if the client cancels 24 hours or more before the visit, paid within 15 days. Less than 24 hours' notice, or no access on arrival: a late-change fee of 20% of the assessment fee, plus GST on that fee, is kept and the balance refunded within 15 days. No fee for a medical emergency or hospital stay, an occupant who declines, a booking made less than 24 hours ahead, or events beyond anyone's control. Matches agreement v2.3.
Service area	Calgary and communities within roughly 50 km of the city centre. Travel surcharge beyond 50 km of the city centre.

Contact info@novoseniorsafety.com for all client communication.
payment@novoseniorsafety.com for e-transfers. Stripe invoices go to the client's own email directly from Stripe on Novo's behalf. **v9**

Assessment scope	12 categories, every relevant room, one visit, no return trip.
Insurance	Commercial general liability and errors and omissions must be in force on the visit date. Confirmed at Stage 3 before travel.

Pricing, late-change fee and visit length

Home type	Price	GST 5%	Client pays	Late-change fee	Target visit	Reassessment
Condo or apartment	\$295	\$14.75	\$309.75	\$59 + GST	About 1.5 h	\$195 + GST
House up to 1,200 sq ft	\$395	\$19.75	\$414.75	\$79 + GST	About 2 h	\$195 + GST
House, 1,200 to 2,500 sq ft	\$495	\$24.75	\$519.75	\$99 + GST	2.5 to 3 h	\$195 + GST
Larger homes	Quoted at consultation, plus GST			20% of quote + GST	Confirmed at consultation	Quoted

Novo Industries Inc. is GST-registered (716914023 RT0001). Every price quoted to a client, on the phone or in writing, is stated as the price plus GST, and the payment request — whether an e-transfer amount or a Stripe invoice — is for the GST-inclusive figure in the "client pays" column. **v9** A price quoted without reference to tax is generally treated as tax-included, which takes 5% out of margin on every job. The website and the report must carry the same convention.

Language rules

Three words carry regulatory weight and are not interchangeable with their casual equivalents. This applies to the manual, the report, the website, the assessment tool, and anything said on a call.

Never say	Say instead	Why
Inspection, inspect, inspected	Assessment, assess, assessed, covered	Alberta licenses home inspection businesses. The service is an occupant safety assessment, not an opinion on the condition of the dwelling. See Open Items, item 2.
Certify, certified, compliant	Aligned with, referenced against	Referencing CSA/ASC B652:23 is not certifying against it.
Recommend this contractor	Three vetted options, your	The public no-commission commitment depends on the client's

Never say	Say instead	Why
	choice	choice being stated as entirely their own.

Stop Rules

Each of these appears in the stage it belongs to. They are gathered here because these are the decisions that hold when the day has gone sideways — which is exactly when they get broken.

- Do not book a visit outside the service area without a direct conversation about it
- Do not travel to a property on an unpaid booking, no exceptions, whichever payment method was used **v9**
- Do not travel to a visit unless insurance is confirmed in force for that date
- Do not let a client sign the agreement at the property, on paper or on a screen, under any circumstance
- Do not send the booking link until both payment and signature are confirmed
- Do not photograph on a device whose camera roll syncs to a personal cloud account
- Do not send a report that fails the Stage 6 quality checklist in order to hit a deadline
- Do not send a report whose summary totals were typed rather than computed from the findings
- Do not use the word "inspection" in any client-facing material
- Do not put the contractor QR code on a report until the hosted list is live
- Do not name a contractor in a report without a completed vetting file on record
- Do not name a contractor who takes deposits without an Alberta prepaid contracting licence
- Do not accept a fee, discount or commission from any contractor for a referral
- Do not issue a referral reward before the referred client's payment is fully reconciled
- Do not send more than one message to a referred contact who has not responded

Why these are absolute

A stop rule is not a preference. Every one exists because breaking it costs more than the deadline it would have saved — an unpaid visit, a false claim in a client report, a signature in the wrong place that changes which law applies, or a contractor relationship that quietly compromises the independence the whole service is sold on.

Contents

Eleven stages, one client.

- 0 Referral and Demand — Where the phone call comes from
- 1 Lead Contact — Website · phone · referral
- 2 Consultation Call — Within 1 business day
- 3 Pre-Visit Preparation — 24 to 48 hours before
- 4 The Assessment Visit — 1.5 to 3 hours, 12 categories
- 5 Post-Visit Processing — Floor plan, scoring, ranking
- 6 Report Assembly — The written deliverable
- 7 Report Delivery — Within 3 business days
- 8 Contractor Introduction — Three vetted, no commission
- 9 Client Referral Program — \$50 e-gift, paid on close
- 10 Recordkeeping and Follow-Up — CRM, metrics, quality, retention
- Client Agreement and Signing — What is signed, how, and where
- Data and Privacy Handling — The operating side of the consent
- Insurance and Credentials — What must be in force
- Unit Economics — What one report costs to produce
- Edge Cases — When the standard path does not fit
- Open Items — What is unfinished, and what blocks launch
- Appendix, Glossary, Version History — Reference

How to Use This Manual

Run one full dry-run client through every stage before taking a paying booking. The dry run is what turns the provisional numbers in this manual into real ones.

What changed in v9

This revision adds Stripe as a second payment option, connected to the Novo Industries Inc. account (Payments, Invoicing and Tax products), alongside the existing Interac e-transfer. **v9**

Payment method is now the client's choice, stated on the call at Stage 2 and confirmed in writing. Both methods still clear before the visit is booked — nothing about the payment-before-booking rule changes.

Operator Summary, Stage 2 script, the Client Agreement and Signing payment terms, the Data and Privacy Handling third-party list, and Open Items item 9 are updated to name Stripe. A new Open Items entry (20) flags that Service Agreement v2.2's payment clause should be updated to name Stripe alongside Interac e-transfer.

The v8 changes are recorded in the Version History.

Stage 0

Referral and demand. Where the phone call comes from. Nothing in Stages 1 to 10 happens without this one.

Trigger Continuous. This stage never closes.

Why it exists A home safety assessment is bought roughly once per family. There is no repeat purchase and no organic search history to inherit. Demand, not delivery, is the binding constraint on this business.

Owner Carl

Channel one — clinical and professional referral

The highest-value channel. A single occupational therapist or discharge planner who trusts the report sends clients for years. What they need is a deliverable they can use professionally: measurements, standard references, and a clear statement of what requires their authorization rather than ours.

Target	What they need to hear	Cadence
Occupational therapists in private practice	The report hands you environmental measurements and B652 references so your AADL authorization visit is shorter. We never authorize equipment; we hand you the data.	Introductory email, then one follow-up. Offer a no-charge sample review.
Hospital and AHS discharge planners	A family with a discharge date in a week needs to know what has to change before the parent comes home. Three business days, written, with costs.	Quarterly touch. Leave the referrer one-pager.
Home care agencies	Your care aides are working in homes that are unsafe for them too. An assessment reduces incident risk on both sides.	Introductory call to the branch manager.
Seniors-focused realtors and downsizing services	A staying-put assessment is the alternative to a sale, and the report is a selling document either way.	Coffee, not email.
Bathroom and accessibility contractors	You get a specified scope of work instead of a guessing game. No referral fee in either direction.	Reciprocal, ongoing.

Build this first

The referrer one-pager, before any outreach: one page, the report's measurements and standard references, the AADL authorization boundary stated plainly, and contact details. A clinician will not read a 34-page sample report, but will read one page written for them.

Channel two — direct to family

- Paid search on fall-risk and dementia-safety intent, with a cost-per-booking target set before spend, not after
- The 30-second home safety check on the website, which exists to capture people who are not ready to call
- The free consultation call, which is the conversion event. Every channel is measured on calls booked, not clicks

Channel three — past clients

Every closed file carries three future opportunities: the reassessment at 6 to 12 months, the \$50 referral program in Stage 9, and a testimonial. None happen without the Stage 10 follow-up being run.

STOP RULE Do not spend on paid acquisition before the referrer one-pager exists and the sample report on the website matches the report actually delivered. Paid traffic against an inconsistent deliverable buys nothing but bad first impressions.

- ☐ A named target list exists for the clinical channel with at least 15 organizations
- ☐ The referrer one-pager is written and current with the delivered report
- ☐ Every lead's source is logged for Stage 10 tracking
- ☐ Paid acquisition has a stated cost-per-booking target and a monthly review date

Stage 1

Lead contact. Website · phone · referral

Trigger A prospective client finds novoseniorsafety.com, is referred by an OT or home care contact, or calls directly.

Channels Website "Request a Call" form, routed to carl@novoseniorsafety.com · Direct email to info@novoseniorsafety.com, the public contact address · OT or home care referral, the private channel, no public materials used

Action The site commits to a callback within one business day. Treat that as a hard deadline, not an aspiration; it is a stated promise on the page the client is reading right now.

Output A scheduled consultation call.

Owner Carl

Service area. Calgary and surrounding communities within roughly 50 km of the city centre, including Airdrie, Cochrane, Chestermere, Okotoks, Strathmore, Langdon, Bragg Creek, De Winton, Heritage Pointe, Priddis and Millarville. Properties farther out are confirmed on the call.

- ☐ Client contacted within 1 business day of first reaching out
- ☐ Lead source logged (web form, phone, referral, or referrer name) for Stage 10 tracking
- ☐ A consultation call is on the calendar

Stage 2

Consultation call. Free, within 1 business day of contact

Trigger Client responds to Stage 1 outreach.

Actions:

- Talk through the situation and confirm the property is inside the service area
- Determine which assessment fits: General Fall Risk, or Alzheimer's and Dementia Safety. Same visit, same 12 categories, same price, different emphasis
- Confirm home size to lock the pricing tier, and state the price plus GST in writing
- Explain that payment is collected in full before the visit, by Interac e-transfer to payment@novoseniorsafety.com or by a Stripe invoice sent to the client's email for card payment — client's choice — for the GST-inclusive amount. The visit is booked only once payment clears, whichever method is used. Nothing is billed afterward. **v9**
- If the client chooses Stripe, send the invoice for the GST-inclusive amount with a one-line description of the service; once Stripe shows it paid, treat that exactly as a cleared e-transfer for every purpose in this manual **v9**
- Say plainly that the agreement arrives by email for electronic signature and is signed before the visit, never at the door
- Once payment clears, send the thank-you email
- Send the SHS Client Agreement for signature through SignWell if not already sent, with Part 1 of the Pre-Visit Client Package
- Once payment and signature are both confirmed, send the appointment date and time as a booking link, with Part 2 of the Pre-Visit Client Package
- If either piece is still outstanding 24 hours after the other arrives, send the follow-up requesting the missing piece before the booking link goes out

Output Payment received, agreement signed, booking link sent, price confirmed in writing.

Owner Carl

The one question that shapes the visit

Ask on every call: what happened that made you look for this now? The answer decides the emphasis of the visit, and it is the sentence that opens the report's executive summary. A recent fall, a hospital discharge date, and a stove left on are three different assessments.

Say the cancellation terms out loud

"You can cancel or move the visit for free up to 24 hours before it, and you get everything back. Inside 24 hours we keep 20% of the fee — unless it's a medical emergency, then there's no charge." Two sentences on the call, and the term in the agreement stops being a surprise later. Families making this decision for a parent are often deciding under pressure, and a clean exit makes the yes easier, not harder.

STOP RULE Do not book a visit for a property clearly outside the 50 km service area without an explicit conversation about travel, or a referral elsewhere.

- ☐ Assessment type confirmed (General Fall Risk or Alzheimer's and Dementia)
- ☐ Price tier confirmed and stated in writing, with GST shown separately
- ☐ Payment method chosen and payment cleared for the GST-inclusive amount — e-transfer or Stripe — and the thank-you email sent
- ☐ Agreement signed through SignWell, remotely
- ☐ Booking link sent only after both payment and signature are confirmed
- ☐ The reason for the assessment is recorded in the client's own words
- ☐ Cancellation and reschedule terms were stated on the call

Stage 3

Pre-visit preparation. 24 to 48 hours before the visit

Trigger Payment and signature both confirmed and the appointment link sent.

Field kit:

- Bosch GLM 50-27 CG laser distance measurer, charged
- Phone or tablet for photographs, with a charged backup battery, camera roll sync disabled or shooting into the dedicated assessment folder
- Assessment tool open in field mode, with a new client file created and the intake pre-filled from the consultation call
- Notepad, shoe covers, flashlight, business cards
- Leave-behind "what to expect" card and the pre-visit client package

Confirmations:

- Payment has cleared, by whichever method the client chose. Do not travel on an unpaid booking
- Insurance is in force for this date — commercial general liability and errors and omissions
- Signed agreement is on file in SignWell, signed remotely
- Assessment focus confirmed — General Fall Risk or Alzheimer's and Dementia
- Address, parking, access instructions, and who will be present
- A pre-visit reminder has gone out to the client the day before

Owner Carl

STOP RULE Do not travel to a property on an unpaid booking, no exceptions.

STOP RULE Do not travel to a visit unless insurance is confirmed in force for that date. A visit performed uninsured is the one operational error with no ceiling on its cost.

STOP RULE Do not photograph on a device whose camera roll syncs automatically to a personal cloud account. A synced copy sits outside every retention promise in the client agreement and survives every deletion done at Stage 10.

- ☐ Payment cleared and confirmed in the CRM
- ☐ Signature confirmed in SignWell
- ☐ Insurance confirmed in force for the visit date
- ☐ Field kit packed and checked against the list above
- ☐ Camera sync setting verified on the device being taken
- ☐ Client file created in the assessment tool with intake pre-filled
- ☐ Access instructions confirmed with the client
- ☐ Pre-visit reminder sent

Stage 4

The assessment visit. About 1.5 hours for a condo or apartment, up to 3 hours for a large home. One visit, no return trip.

Trigger Arrival at the client property.

Visit outline:

- Arrival and intake, 8 to 10 min. Greet, confirm the assessment type, verbally reconfirm the photo and measurement consent already signed at booking, and state plainly that findings and cost estimates arrive in the written report within 3 business days and that the fee was settled at booking
- Exterior and entry, 12 to 15 min. Laser measurements and photographs. Check your own footing and ask about pets before entering
- Room-by-room walkthrough, the bulk of the visit. Move through the home once, scoring every relevant category as you reach it. Minimum two photographs per flagged hazard, one wide and one close
- Client interview, 12 to 15 min. Concerns, mobility, daily routine, funding already in place. Can run alongside the walkthrough where a caregiver is present and willing to talk
- Final check and close, 8 to 10 min. Confirm nothing was missed, restate the report timeline, and flag any immediate safety concern to the client before leaving

Output Full measurement set, photograph set, on-site scoring, field notes.

Owner Carl

STOP RULE Do not let a client sign the agreement at the property. If the emailed agreement is unsigned on arrival, do not produce a paper copy or a tablet — step outside, resend it through SignWell, and wait for the confirmation before starting. A signature collected in the home changes which part of Alberta's Consumer Protection Act applies to the whole engagement.

Field mode: what gets scored on site

The assessment tool holds 143 checkpoints. All of them matter; not all can be scored in front of a client in the time the visit allows. Field mode splits them.

Core set	40 checkpoints scored in every home, covering the highest-weight hazards across all 12 categories. Never skipped.
Triggered modules	Unlocked by the intake answers — a mobility aid in use unlocks the clearance measurements, cognitive status unlocks the 29-item dementia set, stairs present unlocks the stairs module.
Observation sweep	Everything else is photographed and noted on site, then scored at the desk in Stage 5 against the photographs and measurements.

Covered is not the same as scored on site

Twelve categories are always covered. Not every checkpoint inside them is scored in the home. That distinction is what makes the three-business-day report honest and the visit length achievable. A category with nothing wrong still appears in the report, marked assessed with no action required — that is how the client sees the full scope was covered.

Category quick-reference

This is the authoritative version. The field card, the assessment tool, the website and Section 2 of the agreement carry the same twelve; update them together.

Entrances & Exterior	Walkway condition and lighting, step and handrail geometry, threshold heights, door hardware, doormat
Bathroom Safety	Grab bars and wall backing, tub or shower entry, seat height and transfer space, water temperature, floor slip resistance
Lighting & Electrical	Night route lighting, switch reachability, task lighting at counters, lux levels against Table 3, cord routing
Flooring & Trip Hazards	Loose rugs, transitions and thresholds, worn or curling flooring, cords crossing paths, clutter on primary routes
Bedroom & Living Spaces	Bed height and transfer clearance, path width to bathroom, chair height and stability, phone reachable from floor level

Entrances & Exterior	Walkway condition and lighting, step and handrail geometry, threshold heights, door hardware, doormat
Alzheimer's & Dementia	Wandering risk and exit security, stove shut-off, medication and chemical storage, night lighting, wayfinding cues
Kitchen Safety	Reachable storage, stove controls and shut-off, step stool condition, task lighting, floor and mat hazards
Stairs & Hallways	Handrails both sides and geometry, tread uniformity and depth, nosing contrast, stair lighting, hallway clear width
Fire Safety	Smoke and CO alarms, extinguisher presence and reachability, dryer vent, space heater placement, egress
Technology & Emergency	Personal emergency response, phone reachability from a fall position, door and motion sensors, posted emergency contacts
Personal Safety	Mobility aid condition and fit, footwear, medication routine, whether the aid is being used as intended
Crime Prevention	Door and window locks, door viewers, patio door security, spare key practice, visible valuables

Field safety

Immediate hazard	Gas smell, exposed wiring, structural failure: stop assessing that area, tell the client to contact emergency services or a qualified professional right away, flag it at the top of the report, and do not attempt a fix yourself. The client agreement gives consent to contact emergency services where there is immediate risk to life or safety.
Signs of abuse or neglect	Document what was observed, factually. Do not accuse or confront. Share a reputable resource, such as an elder abuse helpline, with the client or family as a next step. Alberta's Protection for Persons in Care Act reporting duties apply to care facilities rather than private homes, so no mandatory report arises here; the duty of care is to the person in front of you.
Occupant objects	If the occupant does not want the visit to continue, whatever the paperwork says, stop. Note it, leave, and settle the refund under the rule in Edge Cases.
Your own safety	Unfamiliar pets, uneven or unstable footing, a client whose

Immediate hazard	Gas smell, exposed wiring, structural failure: stop assessing that area, tell the client to contact emergency services or a qualified professional right away, flag it at the top of the report, and do not attempt a fix yourself. The client agreement gives consent to contact emergency services where there is immediate risk to life or safety.
	mobility could create a fall risk during the walkthrough itself. If in doubt, pause and reassess before continuing.

- ☐ All 12 categories are covered for every relevant room
- ☐ The core set is scored in full, and every triggered module is complete
- ☐ Every finding has a laser measurement attached
- ☐ At least 2 photographs, one wide and one close, exist for every flagged hazard
- ☐ Photo and measurement consent was verbally reconfirmed on arrival
- ☐ A final walkthrough confirms nothing was missed
- ☐ Any immediate safety concern was flagged to the client before leaving
- ☐ Actual door-to-door time and minutes per phase are logged against the target for that tier

Stage 5

Post-visit processing. Same day or next day

Trigger Visit complete, raw data and photographs in hand.

Actions:

- Move all photographs and measurements into the client folder immediately, before doing anything else with them, and clear them from the capture device
- Score the observation-sweep checkpoints against the photographs while the visit is fresh
- Enter the measurements into Floorplanner or RoomSketcher to build the Laser-Measured Floor Plan, with hazard markers numbered to match the findings list
- Rate every finding HIGH, MEDIUM or LOW, and assign each a hazard weight from 1 to 5
- Assign every finding a cost range and a phase. Every finding belongs to exactly one phase — this is what makes the totals reconcile
- Attach the standard reference to each finding: the B652:23 clause where one applies, or an explicit best-practice note where none does
- Let the tool build the Next Dollar Impact ranking and the phase totals. Do not compute these by hand
- Match eligible findings to funding programs — SHARP, AADL, RAMP, HATC, MHRTC — by whether this client actually qualifies, never by default
- Stamp the deletion date in the client file: report delivery date plus 24 months

Output Floor plan, scored findings, ranked priority list, phased capital plan, funding matches.

Owner Carl

The three-part rule

A finding without a measurement is an opinion, and a finding without a stated basis is a guess. Every finding carries three things before it leaves this

stage: what was measured, what is recommended, and why it is a finding — either a clause or a stated best practice.

- ☐ Floor plan built with hazard markers numbered to match the findings list
- ☐ Every finding has a severity, a hazard weight, a cost range and exactly one phase
- ☐ Every finding has either a B652:23 clause reference or an explicit best-practice note
- ☐ The Next Dollar Impact ranking and the phase totals were generated, not typed
- ☐ Funding programs matched to this client's actual eligibility
- ☐ Photographs and measurements moved to the client folder and cleared from the capture device
- ☐ Deletion date stamped in the client file at 24 months from delivery

Stage 6

Report assembly. The written deliverable

Trigger Stage 5 outputs complete.

The report contains:

- A one-page family summary — the page that gets forwarded
- A scope block: what this report is, and what it is not
- Executive summary with computed totals and the five findings that matter most
- Client profile and the reason for the assessment in the family's own words
- Laser-Measured Floor Plan with the numbered hazard overlay
- Findings across all 12 categories, each with measurement, recommendation, cost and standard reference
- Next Dollar Impact ranking, with the ranking formula stated
- Two-Year Capital Plan in three phases, reconciled to the report total
- Funding programs matched to specific findings
- What the estimates are based on — the pricing basis and exclusions
- Three vetted contractors, matched to the specific work, one per primary trade
- What happens next, including the priced reassessment offer
- Credentials, methodology and disclaimers
- Photo appendix and an acknowledgment page

Output Finished client-facing PDF.

Owner Carl

The arithmetic gate

Every dollar figure that appears anywhere other than a finding line is a sum of finding lines. None is typed by hand. Before a report leaves:

- The high-priority total equals the sum of the high-priority findings

- The three phase totals add exactly to the report total, with no finding outside a phase and none counted twice
- Recurring subscription costs are annualized and shown separately from one-time capital costs
- Where a finding offers two options, the report states which one the totals use
- No two pages state a different figure for the same thing

Why this gate exists

A family that finds one number that does not add up stops trusting every other number in the document, including the ones that matter. The arithmetic is the cheapest thing in the report to get right and the most expensive thing to get wrong.

The scope block

The scope block near the front of the report must state, in the family's language, what the assessment is not: not a home inspection and no opinion on the condition or value of the home, not a code or accessibility certification, not medical or occupational therapy advice, not a contractor's quote, visual and non-invasive only, and no guarantee against a fall. This wording mirrors Section 3 of the client agreement. If the two ever drift apart, the agreement governs and the report gets corrected.

What the report never offers

The report does not offer to schedule, coordinate or manage contractors, for a fee or otherwise. Section 9.3 of the agreement says Novo does not sell, supply, install or arrange any modification. Revisit only after a lawyer reviews the agreement.

Proofread against

- Minimum 10pt body text, purposeful colour use, correct colour-on-fill pairing, no orphan words
- Brand: Instrument Serif headings, Plus Jakarta Sans body, the website's red on the warm paper background
- Client name, address and pronouns correct throughout — the single most damaging error in this document is the wrong name
- No occurrence of the word "inspection" anywhere in the document

- Prices shown consistently with GST treated the same way throughout

STOP RULE Do not send a report that fails any item on this page in order to hit the 3-day promise. Hold it and fix it instead. A day late is recoverable; a wrong number is not.

- ☐ Every summary figure is computed from the findings list
- ☐ Phase totals reconcile exactly to the report total
- ☐ Every photograph is labelled and referenced to a specific finding
- ☐ Every measurement is tied to a numbered floor plan marker
- ☐ Every finding carries a clause reference or an explicit best-practice note
- ☐ A contractor match exists for every finding that needs one
- ☐ Funding programs listed match this client's eligibility
- ☐ The scope block matches Section 3 of the client agreement
- ☐ Formatting, language and brand rules above are met

Stage 7

Report delivery. Within 3 business days of the visit

Trigger Report finalized and through the Stage 6 gate.

Actions:

- Email the report to the client from info@novoseniorsafety.com
- Include a short note on what happens next: acting on the phased plan, applying for funding, or contacting a contractor
- Point to the Phase 1 list specifically. It is the shortest path from a 34-page document to a family doing something
- Include the QR code linking to the live hosted contractor list, once that list exists
- Offer the 30-minute walkthrough call included in the fee. Families who understand the report act on it; families who file it do not
- Send the GST receipt for the payment taken at booking, formatted the same whether the client paid by e-transfer or Stripe **V9**

Output Client has the finished report in hand, inside the 3 business day promise made at Stage 1.

Owner Carl

STOP RULE Do not put the contractor QR code on a report until the hosted, publicly reachable contractor list is live and current. A dead link undercuts the report's own no-guessing promise.

- ☐ Report emailed within 3 business days of the visit
- ☐ Contractor QR link tested and working, or omitted
- ☐ The client has a clear, stated next step
- ☐ The walkthrough call was offered
- ☐ GST receipt issued and filed

Stage 8

Contractor introduction. Three vetted, no fee, no commission

Trigger Client wants to act on a recommended fix.

Five-point vetting standard Active Alberta business registration · WCB clearance letter verified · \$2M general liability insurance confirmed · Google rating 4.5 or better across 10 or more reviews · Personal introduction call completed

Hard stop A contractor who takes deposits for home improvement work must hold an Alberta prepaid contracting licence (Service Alberta licensed business search). Unlicensed and taking deposits means they are not named, whatever their score.

Public commitment No referral fees, no commissions, one contractor per primary trade, the client's choice stated as entirely their own. Published on the website, in every report, and in Section 9.3 of the client agreement, and it must hold exactly as written.

Output Referral sent and logged in the Client Follow-Up tab of SHS_Contractor_Pricing_Tracker.xlsx.

Owner Carl

STOP RULE Do not accept a fee, discount or commission from any contractor for a referral, under any circumstance. It breaks a commitment now written into the signed client agreement, which turns a marketing claim into a contractual one.

STOP RULE Do not name a contractor in a client report without a completed vetting file on record for that contractor. The report publishes the vetting standard; naming an unvetted trade makes that a false claim.

- ☐ Three vetted contractors identified for each trade needed
- ☐ A completed vetting file exists for every contractor named in a report, including the prepaid licence check where they take deposits
- ☐ Introduction made and logged in the tracker
- ☐ Outcome recorded at the Stage 10 follow-up

Stage 9

Client referral program. \$50 e-gift card, paid on close, no cap

Trigger An existing client refers a friend.

Actions:

- The referring client shares the friend's contact information, or the friend names the referrer when booking
- The referred friend completes their own assessment and pays in full, by either accepted payment method **v9**
- Once that payment clears, the e-gift card is emailed to the referring client
- No cap on the number of referrals a single client can be rewarded for

Payout rule The voucher is tied to a completed, paid assessment, never to the referral itself. This is the one safeguard the whole program depends on.

Owner Carl

STOP RULE When a client hands over a friend's contact details, that friend gets one message and only one. The message must name who referred them and must give a way to opt out. Canada's anti-spam legislation permits a single message on a referral from someone with an existing relationship; a second unanswered message is a contravention, and the penalties are not proportionate to a \$50 gift card.

STOP RULE Do not issue a reward before the referred client's payment is fully reconciled. Flag any referral pattern that looks self-referential or coordinated for manual review before paying it.

Unbuilt

Still to build: which e-gift service issues the card, and a simple log recording who referred whom, date paid and date redeemed, so a referral chain can be traced if a dispute or an obvious abuse pattern appears.

- ☐ Referred client's payment has cleared
- ☐ Gift card sent
- ☐ Referral logged with date paid and date redeemed

☐ Only one outreach message was sent to the referred contact, naming the referrer

Stage 10

Recordkeeping and follow-up. Closing the file, and learning from it

Trigger Report delivered and payment reconciled.

Actions:

- Log the client, date, price tier, payment method, lead source and outcome in the CRM **v9**
- Set a follow-up reminder 30 to 60 days out to check whether recommended work was completed
- At that check-in, record which findings were acted on, and capture any contractor quote against the report's estimate
- Ask for a testimonial or a referral once there is evidence the client acted on the report
- Set the reassessment reminder at 6 to 12 months, sooner where cognitive or mobility change was noted
- Archive the report and floor plan for seven years as a business record
- Confirm the photograph deletion date is stamped at 24 months from delivery and sits on the deletion calendar

Owner Carl

Metrics tracked from client one

None of this needs a dashboard. A column in the CRM is enough until volume says otherwise.

Callback SLA — % of leads contacted within 1 business day	A published promise. Breaking it silently is the fastest way to lose a lead that was already sold.
Report delivery SLA — % delivered within 3 business days	Same reason.
On-site minutes, actual versus tier target	Turns the provisional visit lengths in this manual into real numbers.
Minutes from visit end to report sent	The single most important number in this business. Report assembly, not the visit, is the cost centre, and it is the ceiling on any multi-assessor model.

Callback SLA — % of leads contacted within 1 business day	A published promise. Breaking it silently is the fastest way to lose a lead that was already sold.
Cost to serve per client, all-in hours	Tells you whether a \$395 assessment is a business or a job. See Unit Economics.
Client action rate — % completing at least one HIGH item by the 30 to 60 day check-in	The real measure of whether the report works. A report nobody acts on has failed regardless of how good it looks.
Quoted versus estimated variance	Turns cost estimates from judgment into a priced local database — an asset a competitor cannot assemble quickly.
Referral conversion — referrals sent versus gift cards redeemed	Whether Stage 9 works at all.
Cancellations and reschedules, with reason, and late-change fees kept	Now that cancellation is a stated right, track how often it is used. A pattern points at the consultation call, not at the clients.
Payment method split — e-transfer versus Stripe	New with Stripe. Tells you which method clients actually prefer, and whether Stripe's card fee is worth it against Interac's zero fee. v9

Quality loop

- Quoted-versus-estimated log. Every real contractor quote a client shares goes in the log against the report's estimate. Review quarterly and correct the estimating ranges.
 - Disputed-finding log. One line per disputed finding. Three disputes on the same checkpoint means the checkpoint is worded wrong, not that three clients were wrong.
 - Report re-read. Re-read one delivered report a month against the Stage 6 checklist. Errors that survive the gate are gate failures, not typos.
 - First-ten review. Every report produced by anyone other than Carl gets read in full before delivery, for the first ten reports at minimum.
- ☐ CRM entry complete, including lead source and payment method
 - ☐ 30 to 60 day follow-up reminder set
 - ☐ Reassessment reminder set

- ☐ Photo and measurement deletion date scheduled and stamped at 24 months
- ☐ Report and floor plan archived to the seven-year business record
- ☐ Quoted-versus-estimated and disputed-finding logs updated where applicable

Client Agreement and Signing

Reference

One signed document only: the SHS Client Agreement, sent through SignWell. No separate signature-required documents. Every additional signature request is one more reason for a client to stall.

Document Senior Home Safety Service Agreement, v2.3
(Senior_Home_Safety_Service_Agreement_v2.3.pdf)

Tool SignWell. Free tier covers up to 3 documents a month; move to the paid tier, roughly \$10 to \$12 a month unlimited, once volume passes that.

When it is sent At Stage 2, after the consultation call, with the fee and GST already filled in. Never blank.

Where it is signed Remotely, by the client, before the visit. Never at the property.

Legal footing Electronic signatures are binding in Alberta under the Electronic Transactions Act. Any platform that captures clear signer intent, identifies the signer and keeps an audit trail meets that bar, SignWell included. Section 13 of the agreement records the client's consent to sign electronically.

Why remote signing is a rule and not a preference

A contract negotiated or concluded in person somewhere other than the seller's place of business is a direct sales contract under Alberta's Consumer Protection Act. That brings a licensing requirement, prescribed contract contents, a ten-day cancellation right in prescribed wording and type size, and — where any of that is missing — a one-year cancellation right instead of ten days, with administrative penalties reaching six figures. Signing remotely, before the visit, keeps the engagement out of that regime entirely. Schedule A of the agreement carries the compliant cancellation statement anyway, so a contract signed in the home is still a valid one; the rule exists so that never has to be tested.

What the agreement covers

- Fixed price with GST shown separately, and the statement that it is a price rather than an estimate
- Payment in full at booking, and the refund terms below

- Scope of the visit and the report, and the full statement of what the assessment is not
- Photograph and personal information consent, retention, storage and access rights, with marketing consent as a separate opt-in
- Access and site conditions, and the right to pause or end a visit
- Authority and capacity where someone signs for the occupant
- Report ownership, the client's licence to use it, and no reliance by third parties
- Independence and the no-commission commitment
- Liability capped at fees paid, with injury and property damage carved out

Payment and cancellation terms

Payment	In full at booking, GST-inclusive, by Interac e-transfer or by Stripe invoice for card payment — client's choice. The visit is not scheduled until it clears.
Client cancels 24 hours or more before	Full refund, no reason required, paid within 15 days. Rescheduling at this point is free.
Less than 24 hours' notice	Late-change fee of 20% of the assessment fee (from \$59 to \$99 by tier), plus GST on that fee, kept; the balance refunded within 15 days. If the client reschedules instead, the payment carries over and the fee is paid before the new date is confirmed. Agreement clause 4.5.
No access on arrival	Treated as a late change. Same 20% fee.
No fee applies	Medical emergency or hospital admission of the client or occupant; the occupant declines the visit; a visit booked less than 24 hours ahead; severe weather or other events beyond control. Agreement clauses 4.6 and 14.11.
Visit ended part way through	Under Section 7 (unsafe home, distressed occupant, abusive behaviour): refund of the fee less a fair amount for work already done. Agreement clause 5.3.
Novo cancels or misses	Rescheduled within 5 business days, or a full refund at the client's choice.
After the visit	The service has been performed. The report is delivered and

Payment	In full at booking, GST-inclusive, by Interac e-transfer or by Stripe invoice for card payment — client's choice. The visit is not scheduled until it clears.
	the fee is earned.

NOTE A refund is issued through whichever method received the payment — an Interac e-transfer back to the client, or a refund through Stripe to the original card. Both settle within the 15-day window stated above. **v9**

Agreement version

Agreement v2.3 carries these terms, the registered office (923 McKinnon Drive NE, Calgary, AB T2E 6A6) and the GST number. It replaces v2.1, which used 48 hours' notice and a \$95 charge. Check that the copy loaded in SignWell is v2.3 before the first send — the version appears under the title on page one. v2.3 adds Stripe card payment to the payment clause (4.3) and names Stripe in the privacy list (6.6).

Information sent with the agreement, no signature required

The Pre-Visit Client Package v2 (SHS_PreVisit_Client_Package_v2.pdf) replaces the separate notes listed in v7.

- Part 1, sent with the SignWell request: the three booking steps, payment instructions for both methods, the price table with GST, and the agreement in plain words, including cancellation
- Part 2, sent once signature and payment are in: confirmed date and time, assessor, reminder preference, what to have ready, what happens during and after the visit, credentials
- Sample report link, so the client sees the deliverable before signing anything

Data and Privacy Handling

Reference

Section 6 of the client agreement makes specific promises about photographs and personal information. This section is how those promises are kept. A privacy commitment that the operation does not actually perform is worse than no commitment, because it is a written statement that turns out to be false.

What is collected and why

Contact details, photographs and measurements of the home, notes on how the occupant moves through and uses it, and payment records — solely to prepare and deliver the report, answer questions about it, collect payment, and keep required business records.

Where it lives

Capture device	Phone or tablet, camera roll sync disabled or shooting into the dedicated assessment folder. Photographs are moved off the device at Stage 5 and cleared.
Working storage	One folder per client, named by client and visit date, on the business cloud account. Password-protected, device encryption on.
Archive	Report and floor plan, seven years. Photographs and measurements, 24 months, then deleted.
Third parties	SignWell for signature, Stripe for invoicing and card payment processing, Zoho Books for receipts and bookkeeping, the email provider, the cloud storage provider, and Formspre for the website form. Some hold data outside Canada, which the agreement discloses. Keep this list current; a client may ask for it, and the website Privacy page must match it.

The deletion routine

At Stage 5 the deletion date is stamped in the client file. At Stage 10 it goes on a deletion calendar. Once a month, work that calendar: delete the photographs and measurements for every client whose date has passed, and note the deletion in the file. A promise with no calendar entry behind it is not a retention policy. Payment records held by Stripe and Zoho Books

follow those services' own retention rules for financial records, separate from the 24-month photograph rule. **v9**

If a client asks what you hold

The agreement gives 45 days to respond. Answer with what is held, what it was used for, and who it has been shared with. Correct anything factually wrong. A request to delete photographs early is honoured; a request to delete the report itself is declined, because business records must be kept — say so plainly rather than refusing without a reason.

If something is lost or exposed

A lost phone, a compromised email account, a file sent to the wrong address. Contain it first, then assess whether a reasonable person would see a real risk of significant harm to the people involved. Where there is, Alberta's Personal Information Protection Act requires a report to the Information and Privacy Commissioner without unreasonable delay, and the affected clients should be told directly. Record what happened, what was affected, and what was done, on the day it happens.

Standing checks

- ☐ Camera roll sync is off on every device used in the field
- ☐ Deletion calendar worked once a month, with deletions noted in the client files
- ☐ The list of third parties holding client data is current
- ☐ Devices carry encryption and a screen lock

Insurance and Credentials

Reference

Commercial general liability Not less than \$2,000,000 per occurrence. Covers injury or property damage caused during a visit — the exposure the agreement's liability cap deliberately does not limit.

Errors and omissions Not less than \$1,000,000. Covers the report and the advice in it.

In force from 1 October 2026, paid the week of 22 September, and in force before any client visit. No visit may be performed before the policy is in force and the certificate is saved in the SHS folder.

Booking before the policy is bound The website states "Fully Insured." If a paid booking arrives before the policy is bound, bind the policy and save the certificate before the visit date is confirmed to the client.

Certificate Kept current and provided to any client who asks, as Section 9.4 of the agreement promises.

Credentials stated SHSS and RHFAC Professional. Both are professional designations, not a provincial licence, and must never be described as one.

Vulnerable sector check Held back from all client-facing materials until issued. Add one factual line to the agreement, the website and the Pre-Visit Client Package once in hand — nothing before.

Confirm the two coverage figures above against the bound policy when it issues. If the policy differs, correct Section 9.4 of the client agreement the same day, since the agreement warrants those amounts to the client.

Unit Economics

Reference

Service-level metrics tell you whether clients are happy. These tell you whether the business works.

Cost element	Estimate	Note
Consultation call, booking admin, follow-up	0.5 h	Includes the payment and signature chase
Travel, round trip inside 50 km	0.5 to 1.5 h	Plus fuel and vehicle wear, currently uncoded
On-site visit, \$395 tier	About 2.0 h	Per the tiered target
Post-visit processing and report assembly	2.0 to 3.0 h	Floor plan, scoring, ranking, phasing, funding match, contractor match, proofread
Total per client	5.0 to 7.0 h	Implied rate at \$395: roughly \$56 to \$79 per hour, before vehicle, insurance, software, and the unbilled hours spent on leads that never book

What this means

- Report assembly is the cost centre, not the visit. Two to three hours of desk work per client is the largest single line, and the one most reducible by finishing the assessment tool. Every hour cut there is an hour of capacity created.
- The multi-assessor model depends entirely on this number. Assessors across Canada sending photographs to a central report factory only works if report time per file falls to roughly an hour. At three hours per report, the ceiling is one person's calendar.
- Unbilled lead time is real. If it takes four consultation calls to book one assessment, the real rate is meaningfully lower than the table shows. Track calls-to-bookings from client one.
- The reassessment is the highest-margin product. \$195 against a fraction of the work, because the floor plan exists, the baseline exists,

and the client is already known. Two reassessments are worth more than one new assessment in hours saved.

- Stripe's card processing fee (roughly 2.9% plus \$0.30 per transaction) reduces margin slightly versus a zero-fee Interac e-transfer. Worth tracking against the payment-method split metric in Stage 10 once volume exists. **v9**

The three numbers to watch

Three numbers, reviewed monthly, answer whether this business scales: minutes from visit end to report sent, consultation calls per booking, and cost per booking on paid acquisition. Everything else is secondary until those three are known.

Edge Cases

When the standard path does not fit

Only certain categories wanted	Note the reduced scope in writing before the visit. Price does not change unless home size changes, since time on site is similar regardless of category count. The report states which categories were excluded at the client's request.
Access to a room refused	Note it in the report as a stated limitation. Do not estimate or guess at a finding that could not be observed.
Measurement not achievable to ± 1.5 mm	Tight spaces and obstructions happen. Use the closest achievable measurement and flag it as approximate.
Client requests a second visit	Not built into current pricing. Treat it as a new booking or a documented exception, never a silent freebie.
Client disputes a finding or the tier	Refer back to the written confirmation sent in Stage 2. If none was sent, that is a process failure to fix, not a case to argue in the moment. Log the disputed finding in the Stage 10 quality loop.
Agreement unsigned on arrival	Do not sign at the door. Step outside, resend through SignWell, and wait for confirmation. If the client cannot sign remotely at that moment, reschedule at no charge or refund in full rather than proceeding.
Late cancellation for a medical reason	A medical emergency or hospital admission of the client or occupant: no late-change fee, whatever the notice. Offer a new date or a full refund. Note the reason in the file; do not ask for proof.
Booking made less than 24 hours ahead	The late-change fee does not apply to that booking. Say so on the call.
Novo misses a booked visit	Illness, vehicle, weather, or no backup coverage. Offer the client the choice: rescheduled within 5 business days, or a full refund. Do not offer only a new date. Log it — repeat occurrences are an Open Items problem, not a client problem.
Occupant does not want the visit	Stop, whatever the signed paperwork says and whoever booked it. Full refund. The agreement is written so this is always available.
Contractor referral	Log the outcome in the Client Follow-Up tab of the

Only certain categories wanted	Note the reduced scope in writing before the visit. Price does not change unless home size changes, since time on site is similar regardless of category count. The report states which categories were excluded at the client's request.
does not work out	tracker. Two poor ratings flag the contractor for review; three strikes is the trigger to remove them from the list.
Referral chain looks coordinated	Same address, same phone pattern, rapid-fire referrals. Hold the reward and review manually before paying out.
Quote comes back far above estimate	Ask the client to send it. Log it against the estimate, review whether the range needs correcting, and tell the client plainly what changed. This is a service, not an embarrassment.
A finding needs a professional Novo cannot provide	Say so and refer out — OT for equipment authorization, electrician for wiring, engineer for structure. The scope block in the report exists so this conversation is easy.
Stripe invoice unpaid after a few days	Send one polite follow-up. If it stays unpaid, offer the Interac e-transfer alternative before letting the booking lapse — some clients find a card invoice easier to forget than a bank app they already use daily. v9

Open Items

Before going live

Blocking

Item 1 blocks the first client: the agreement warrants insurance that is not yet in force. Everything else on this list can run alongside it.

#	Item	Status
1	Insurance bound. Section 9.4 of agreement v2.3 warrants \$2M general liability and \$1M errors and omissions. Bind the policy, save the certificate, and confirm the figures match. The agreement's identity fields (registered office, GST number) are complete in v2.3.	Blocking
2	Home inspection classification. Alberta licenses home inspection businesses, defined as giving an opinion on the condition of a dwelling from a non-invasive examination. Get a written view from Service Alberta or a one-hour opinion from an Alberta regulatory lawyer on whether this service falls inside it. The language rules in this manual and the scope block in the report are the mitigation; they are not a substitute for the answer.	Open
3	Direct sales confirmation. Confirm with the Consumer Contact Centre, 1-877-427-4088, that a remotely signed agreement keeps the engagement outside the direct-selling regime. Not	Open

#	Item	Status
	blocking, since remote signing is a stop rule and Schedule A carries the compliant statement either way.	
4	Insurance confirmation. Confirm the bound coverage figures on issue and correct Section 9.4 of the agreement if they differ. No visit before the policy is in force.	With item 1
5	On-site time baseline. The 1.5 to 3 hour targets are provisional. Run the test visit, log every phase, and correct the table in the Operator Summary, the agreement, the package and the website together.	Test visit Sept 12–13
6	Report assembly baseline. The 2 to 3 hour estimate in Unit Economics is a judgment, not a measurement. Time the first three reports end to end.	Open
7	Hosted contractor list. The QR code needs a live page to point to. Confirm it is built and pulling from the current tracker before the code appears on any report.	Open
8	Contractor vetting files. 18 candidates are listed in SHS_Contractor_Pricing_Tracker.xlsx; none has a completed five-point file yet. Until one does, the contractor section of the report cannot name a real trade. Target: one fully vetted contractor per core trade by 26 September.	Open

#	Item	Status
9	Payment mechanics. TD autodeposit to payment@novoseniorsafety.com is confirmed working, Zoho Books is set up, and Stripe (Payments, Invoicing, Tax) is now connected under the Novo Industries Inc. account for card payment as a second option. The receipt wording, with the GST number, is in the Client Scripts and applies to both methods.	Done
10	Trade name. Register "Senior Home Safety." The registered office and GST number are already in Section 1 of agreement v2.3.	Trade name open
11	Deletion calendar. Build it before the first client file exists. Retrofitting a retention promise is how it gets missed.	Open
12	Referrer one-pager. Written (SHS_Referrer_OnePager_Guide.pdf). Keep it current with the delivered report.	Done
13	Referral e-gift card mechanism. Which service issues the card, and where the referral log lives.	Open
14	No backup coverage. Every stage has one owner. Minimum fix: a handover pack per booked client. The missed-visit remedy in Edge Cases is stated, which makes the gap a cost rather than an unknown.	Open

#	Item	Status
1 5	Scripts. The consultation call, confirmation email, payment receipt, pre-visit reminder and follow-up are written in SHS_Client_Scripts.pdf, updated 11 September to match agreement v2.2. Needs a pass to add the Stripe-invoice variant of the payment script alongside the e-transfer one.	Update needed
1 6	No-booking follow-up. Three options are written in the Client Scripts, section 6. Pick one and use it every time.	Choose one
1 7	Client agreement unreviewed by counsel. The agreement has had a structured compliance review; it has not had a lawyer. Those are different things. Review planned once funds allow, with items 2 and 3 as the priority questions.	Open
1 8	Website against v8. Updated homepage (plus GST, visit length, SHARP wording, sample totals) and new Terms and Privacy pages are prepared for upload. Still to do on GitHub: upload them, and delete xREADME.md, files.zip and shs_assess_v1.html.	Upload
1 9	Phone photo sync. Turn off cloud photo sync on the phone before the test visit, or shoot into a folder that does not sync.	Before Sept 12
2 0	Agreement payment clause. Service Agreement v2.3	Done

#	Item	Status
	now names Stripe invoice (card) alongside Interac e-transfer, client's choice, and lists Stripe as a data processor in Section 6.6. Updated 22 Sep 2026. 	

Recommended order

Item 1 first — nothing goes to a client until the policy is bound. Item 19 before the test visit. Item 2 next, because the answer could change how the service is described everywhere. Items 10, 11 and 18 before the first booking. Items 7 and 8 before the report and the clinical channel go live. Item 20 before Stripe is offered to a real client on a call. Backup coverage matters once real volume starts, not before the first dry run. 

Appendix and Glossary

Reference

Appendix A — Early Service Request Clause (inactive)

Preserved from v5 so the wording is not lost between versions. Not active, and probably no longer needed. It was written for a situation where a statutory ten-day cancellation window ran past the visit date. Remote signing removes the direct-sales window, and payment at booking with a full pre-visit refund handles the commercial case. Hold this only in case Open Items item 3 comes back differently than expected.

"I am requesting that Senior Home Safety perform my assessment before the standard cancellation period ends. I understand that if I cancel after the visit has been completed, Senior Home Safety is entitled to reasonable compensation for the assessment already performed, deducted from my refund, and that I will still receive a refund of the remaining amount within 15 days of cancellation."

If ever used: this must be an active choice the client makes, checked or signed separately from the main agreement, never a default. A pre-checked box or fine print defeats the purpose and increases exposure rather than reducing it. The mechanism is refund-first, compensation-second: the right to deduct does not exist until the refund obligation has been met.

Glossary

Next Dollar Impact	The section of every report ranking recommended fixes by hazard weight × severity, divided by the square root of estimated cost, so the highest-value fix rises to the top regardless of its raw price.
The five that matter most	The separate executive-summary list ranked by hazard severity alone. Answers what is most dangerous; Next Dollar Impact answers what to do first with limited money.
Two-Year Capital Plan	A phased plan — this month, within 3 months, within 6 to 12 months — with a running cost total at each phase. Every finding sits in exactly one phase.
Hazard marker	A numbered point on the Laser-Measured Floor Plan tying a location in the home to a specific finding in the report.
Core set	The 40 checkpoints scored in every home, in every visit,

Next Dollar Impact	The section of every report ranking recommended fixes by hazard weight × severity, divided by the square root of estimated cost, so the highest-value fix rises to the top regardless of its raw price.
	without exception.
Triggered module	A group of checkpoints unlocked by an intake answer, such as the 29-item dementia set.
Observation sweep	Checkpoints photographed and noted on site, then scored at the desk in Stage 5.
Late-change fee	20% of the assessment fee, plus GST on that fee, kept when a client cancels or reschedules with less than 24 hours' notice or there is no access on arrival. Agreement clause 4.5.
Stripe	The payment processor connected to the Novo Industries Inc. account (Payments, Invoicing and Tax products), offered alongside Interac e-transfer for client payment. The client enters card details directly on Stripe's own hosted page; card data never passes through Novo's systems. v9
SHARP	Seniors Home Adaptation and Repair Program. An Alberta low-interest home equity loan of up to \$40,000 for home safety and accessibility work, for homeowners 65+ with household income of \$75,000 or less who retain 25% equity. A separate SHARP grant covers basic, essential home repairs for lower-income seniors who do not qualify for the loan (single income \$32,690 or less, couple \$53,800 or less; up to \$5,000 a year). Check alberta.ca before quoting figures.
AADL	Alberta Aids to Daily Living. Cost-shared equipment funding, 25% client share to \$500 per family per benefit year. Authorization requires an AADL-authorized assessor, normally an occupational therapist. SHS identifies; the OT authorizes.
RAMP	Residential Access Modification Program. An income-tested Alberta grant for mobility-related home modification; the modification request must come from a rehabilitation professional or another person familiar with the applicant's needs.
HATC	Home Accessibility Tax Credit. Federal, 15% of up to \$20,000 per year, maximum \$3,000.

Next Dollar Impact	The section of every report ranking recommended fixes by hazard weight × severity, divided by the square root of estimated cost, so the highest-value fix rises to the top regardless of its raw price.
MHRTC	Multigenerational Home Renovation Tax Credit. Federal, refundable, 15% of up to \$50,000, maximum \$7,500, one claim per qualifying individual per lifetime.
B652:23	CSA/ASC B652:23 Accessible dwellings, the national standard referenced in reports for technical alignment. Referencing it is not certifying against it.
Model C	The private, non-public referral channel through occupational therapists and home care contacts. No public-facing materials are used for it.
Primary trade	The main contractor category matched to a finding — a grab bar installation matches a general handyman or bathroom specialist, not an electrician.
Direct sales contract	Under Alberta's Consumer Protection Act, a contract for goods or services over \$25 negotiated or concluded in person somewhere other than the seller's usual place of business, carrying a ten-day no-reason cancellation right that cannot be waived by contract. Avoided here by signing remotely.
Prepaid contract	Under the same Act, a contract for construction, maintenance, repair, alteration or improvement work on a private dwelling, concluded in person away from the seller's place of business, where money is accepted before the work is done. Earlier versions of this manual stated that the regulation names an energy audit, inspection, survey or assessment of a home as a covered service. Service Alberta's published guidance does not support that. Energy audits appear on a different list — products banned from unsolicited door-to-door selling. A home safety assessment involves no work on the dwelling and is signed remotely, so the regime appears not to apply. Confirm on the Open Items item 3 call rather than relying on either version. Contractors who take deposits for home improvement work do need a prepaid contracting licence — see Stage 8.
Home inspection	Under Alberta's Home Inspection Business Regulation, an opinion as to the condition of a dwelling based primarily on a non-invasive examination of readily accessible features

Next Dollar Impact	The section of every report ranking recommended fixes by hazard weight × severity, divided by the square root of estimated cost, so the highest-value fix rises to the top regardless of its raw price.
	and components. Both the business and the individual inspector require a licence. See Open Items, item 2.

Version history

V1 Sep 2026 · initial 10-stage draft

V2 Sep 2026 · corrected pricing to the live tiered structure; added Operator Summary, Done When checklists, stop rules, edge cases, glossary and basic metrics

V3 Sep 2026 · added Client Communication Map and New Client Package; SignWell confirmed as e-signature tool; Client Agreement proceeding unreviewed by attorney as an accepted, documented risk

V4 Sep 2026 · single-signature agreement confirmed throughout; tier-scaled visit length and room-by-room outline; booking sequence rebuilt around payment as the trigger; photo retention closed at 24 months; Consumer Protection Act cancellation question elevated to blocking, Early Service Request Clause added and held inactive

V5 Sep 2026 · expanded field kit; verbal consent reconfirmation, two-photo-per-hazard standard, photo backup step; Category Quick-Reference, Alzheimer's priority callout, Field Safety Note; field card rebuilt

V6 Sep 2026 · brand-aligned to novoseniorsafety.com; taxonomy unified to the website's 12 categories; visit length set at 2 to 3 hours with field mode; Stage 6 arithmetic gate; Stage 0 referral and demand; Unit Economics; Stage 10 quality loop; SHARP, AADL and RAMP corrected; stop rules for typed totals and unvetted contractors

V7 Sep 2026 · folded in the September legal review of the client agreement. Cancellation settled (48 hours' notice, \$95 kept) and the 24-hour window removed; remote signing made a stop rule; GST added to every price; payment-at-booking confirmed with the agreement to be reissued to match; insurance made a pre-travel gate; Data and Privacy Handling, Client Agreement and Signing, and Insurance and Credentials sections added; language rules retiring "inspection"; home inspection licensing added to Open Items; prepaid contract glossary entry corrected; CASL one-message

limit on referral outreach; missed-visit and occupant-refusal remedies added; Early Service Request Clause preserved as an appendix

V8 11 Sep 2026 · aligned to agreement v2.2 and Pre-Visit Client Package v2: cancellation changed to 24 hours' notice with a 20% late-change fee and named no-fee cases; visit length 1.5 to 3 hours; insurance start tied to binding, with the rule for an early booking; field mode corrected to 143 checkpoints and a 40-item core set; prepaid contracting licence added as a contractor hard stop; single contractor tracker; no contractor coordination offer in reports; SHARP grant described; Open Items refreshed and item 19 added; set in Arial 14 point

V9 22 Sep 2026 · Stripe (Payments, Invoicing, Tax) added as a second client payment option alongside Interac e-transfer, client's choice, connected under the Novo Industries Inc. account; Operator Summary, Stage 2 script, Stage 7 receipt note, Stage 9 and Stage 10 updated to reflect the second method; Client Agreement and Signing payment table and Data and Privacy Handling third-party list updated to name Stripe; Unit Economics notes the card-processing fee; new Open Items item 20 flags that agreement v2.2's payment clause still needs updating to name Stripe; Open Items item 15 (scripts) reopened to add the Stripe-invoice call variant; Open Items item 9 marked Done

A Novo Industries Inc. service · novoseniorsafety.com · info@novoseniorsafety.com
